

FEATURED ALUM-A-LIFT
WIRE SPOOL LIFT WITH PRONG AND FORKS

PROJECT
31569

MODEL L200CS-76

FEATURING Folding Tapered Prong, Adjustable Dual Forks, Low Profile Legs

HANDLING 80 lb [36 kg] Spools

DETAILS This multi-function lifting device includes two different methods for handling spools of wire. A central fold-down prong is used to pick spools by the core, perfect for removing them from pallets where packaging material obstructs the outer diameter. When the central prong is folded away, the lift's forks can be used to support spools from below, leaving the core free for loading onto process equipment unwind shafts.
