

# FEATURED ALUM-A-LIFT ROLLER DECK LIFT FOR SERVER MANUFACTURING

## PROJECT 32432

**MODEL** B350CS-78

**FEATURING** Side-to-Side Roller Deck with Flip-Up Stops

**HANDLING** 125 lb [57 kg] Servers

**DETAILS** Manufacturers of servers and their contract manufacturers have different needs than users in datacenters. Speed of throughput is critical. Product mix is often low, which enables more specialized designs. This lift is used for racking completed chassis and features a low friction roller deck that is optimized for the specific system being assembled. Spring-loaded flip-up stops prevent the valuable components from sliding off the lift during transport and are rotated out of the way by a single throw handle when ready for unloading.
